

Digi Relocates Australian Headquarters to Milton to Bolster Exponential Growth and Opportunities

May 19, 2021

Newly renovated facility in Milton will drive collaboration, and engineering leadership to re-affirm market-leading position as employees return to office

HOPKINS, Minn.--(BUSINESS WIRE)--May 19, 2021--

[Digi International](#), (NASDAQ: DGII), a leading global provider of Internet of Things (IoT) connectivity products and services, today announced it will relocate its Brisbane-based headquarters from Rocklea to Milton in September 2021.

The renovated facility will further concentrate its expanding team of engineering and technology talent in a modern, collaborative space including staff from Digi's Opegear subsidiary that specializes in solutions for secure, resilient network access and IT automation. The Milton office is strategically located to strengthen Digi's presence and increase visibility in the Australian market while providing a welcoming environment for staff returning to work.

"We are looking forward to this move to strategically support our continued expansion," said Managing Director and Vice President of Engineering of Digi Australia, Matt Ramsay. "In the last year alone, we have achieved double-digit growth and significantly increased our presence in Brisbane. Thanks to our world-class team of innovators, no other network solutions provider in the area has the depth of engineering talent we possess."

Digi Australia's engineering team supports an internal lab, where much of the early cellular prototyping, thermal testing and electrical engineering is conducted. Digi Australia recently invested in a next generation 5G call box to simulate 5G mobile network towers. Digi's Brisbane staff have designed the core operating systems for Digi's cellular routers and console servers that provide best-in-class performance for high-speed wired and wireless connectivity, including the design of Digi's new 5G platform and 5G-enabled devices. The new Milton office will expand and enable new levels of team-based collaboration.

"This newly renovated office space will support our continued growth in the Australian market and beyond," said Simon Pincus, Vice President of Engineering at Opegear. "As the company continues to grow within Digi International, we're excited to welcome the team's partial return to office, and further increasing our market reach – all under the same roof."
