

Digi International Expands Digi Axxess Platform with Native Remote Access, SIM Management, and Advanced IoT Analytics

06/11/26

MINNEAPOLIS--(BUSINESS WIRE)--Jun. 11, 2026-- [Digi International](#) (NASDAQ: DGII), a leading global provider of IoT connectivity products and secure connectivity solutions, today announced seven new features for [Digi Axxess](#), its cloud-based infrastructure management platform, expanding native remote access, cellular SIM management, and advanced data visualization. Three of these features are exclusive to Digi, made possible by its end-to-end ownership of hardware, cellular SIM, private network, and cloud.

A Unified Approach to Distributed Infrastructure Management

Digi International Expands Digi Axxess Platform with Native Remote Access, SIM Management, and Advanced IoT Analytics

As industrial deployments scale, operators are increasingly forced to manage separate systems for:

- Remote access
- Cellular SIM administration
- Threshold monitoring
- Analytics and visualization
- Device troubleshooting

Digi Axxess consolidates those capabilities into one centralized platform.

“This release is the result of listening closely to our customers. Customers described their needs, and we delivered,” said Jayson Ness, Product Manager at Digi International. “What makes it different is that three of these expansions are only possible because Digi owns the full stack from device to cloud — including the hardware running at the remote site, such as Digi Z45 Industrial Controller and Digi Connect Sensor XRT-M. No third-party tools, no separate portals, no extra software. One platform.”

New Features in Digi Axxess

Digi Axxess VPN Link

Operators can securely access remote edge devices directly through Digi Axxess without downloading, installing, or configuring a separate OpenVPN client.

Integrated Cellular SIM Management

Available exclusively for Digi data plan customers, Digi Axxess now provides centralized visibility into ICCID, IMEI, IP address, and account-level SIM details directly within the platform.

Non-Digi Device Visibility

Organizations can remotely access the webUI of connected devices and organize non-Digi devices operating on a Digi Axxess VPN SIM without requiring additional cloud subscriptions.

Interactive Multi-Device Graphing

Users can compare sensor readings and operational data across multiple readings on a single device and across different readings on multiple devices using interactive graphs with expanded historical visibility.

Threshold History Analytics

Threshold breach history helps teams distinguish isolated anomalies from recurring operational patterns that may indicate developing equipment failures.

Automation Overview Mapping

A new visual overview maps relationships between physical inputs, virtual inputs, automation logic, and calculated outputs.

Battery Acknowledgement Monitoring

Battery acknowledgement capabilities help reduce unnecessary maintenance dispatches by differentiating intentional battery replacements from either

unexpected or configuration related disconnects.

Operational Benefits for Industrial Organizations

These expansions help organizations:

- Simplify remote infrastructure management
- Reduce dependence on third-party remote access tools
- Consolidate SIM and device visibility into one platform
- Improve proactive maintenance planning
- Accelerate troubleshooting across distributed environments
- Extend visibility to non-Digi assets using Digi cellular connectivity

These expansions are especially valuable for organizations managing remote industrial infrastructure across utilities, manufacturing, oil and gas, transportation, environmental monitoring, and other distributed operational environments.

Availability

All seven features are available now to Digi Axess customers. Digi Axess is designed to work natively with Digi's industrial automation hardware portfolio, including Digi Z45 Industrial Controller and Digi Connect Sensor XRT-M.

About Digi International

Digi International (NASDAQ: DGII) is a global technology leader empowering enterprises to build, connect, and manage the critical systems that drive their businesses. Through an integrated portfolio of managed services, intelligent software, secure connectivity, and resilient edge solutions, Digi helps enterprises monitor, update, and control assets in real time, strengthen compliance, streamline workflows, and keep distributed operations running without interruption. Since 1985, Digi has enabled organizations worldwide to modernize operations and confidently connect millions of devices. Learn more at www.digi.com.
