

## **Digi International to Provide CompactPCI Communications Adapters for Tropic SA Carrier Switches**

September 14, 1999

Business Editors & Technology Writers

MINNEAPOLIS--(BUSINESS WIRE)--Sept. 14, 1999--

**New DataFire Adapters Embedded in Tropic Switches Help Brazil  
Manage Exploding Internet Traffic Growth**

Digi International Inc. (NASDAQ: DGII) today announced a multi-million dollar, multi-year agreement to embed its new CompactPCI-based DataFire communications adapters into telecommunications carrier switches developed and manufactured by Brazil-based Tropic Systems and Telecommunications SA. Tropic provides a third of the digital switches installed in Brazil, which together connect over five million phone lines.

The DataFire adapters, based on Houston Technology™, will reside in a module built into the Tropic-RA central office switch, where they control all incoming Internet-bound calls to a high-speed network interconnecting Brazil's Internet service providers (ISPs). Digi's products will be incorporated into upgrades of 400 existing switches currently in use and also will be built into new switches.

Supporting Internet Growth in Developing Countries

John Schinas, Digi's Chief Executive Officer, said Digi's adapters will help Brazilian carriers separate voice and data calls. "In Brazil, Internet traffic is growing over 100 percent a year and that growth is compounded by the recent privatization of the telecommunications sector," he said. "To grow the economy, you need an Internet-ready telecommunications infrastructure, and Tropic will deliver that. We think this model can work in other emerging markets as well."

Tropic is using Digi's CompactPCI-based DataFireDSP 30/60 access concentrator together with the DataFire SYNC/2000 cPCI synchronous WAN adapter. The standards-based adapters help Tropic-RA call processing identify incoming traffic as either voice or data and direct the calls to a traditional TDM trunk or to an IP network.

"We have selected Digi for this development because of our strong existing relationship and because of their solid technical expertise with voice and data integration," said Americo Richieri, president of Tropic. "We believe the resulting developments will further strengthen the capabilities of the Tropic-RA switch and will enhance its attractiveness to the global telecommunications market."

Open CompactPCI Standard Gains Strength

Switch makers such as Tropic are attracted to CompactPCI (cPCI) products over traditional desktop PCI boards because they are more reliable and scalable. The cPCI standard supports hot swapping and is more robust and extensible so more boards can be installed in a single chassis (often eight). CompactPCI also provides support for the H.110 supplementary bus standard, which is more advanced than the traditional MVIP and SCSA standards.

Digi is unveiling both cPCI DataFire adapters at the Network + Interop trade show this week in Atlanta. They complement Digi's existing line of PCI-based AccelePort and DataFire access adapters, which provide digital and analog connectivity for open-server remote access, faxing, routing, and other communications applications running on Windows NT, Novell Netware, UNIX, and Linux.

About Digi International

Digi International (Nasdaq: DGII), based in Minneapolis, is a leading worldwide provider of voice and data communications hardware and software that delivers seamless connectivity solutions for open systems, server-based remote access and LAN markets. The company markets its products through a global network of distributors and resellers, system integrators and original equipment manufacturers (OEMs). For more information, visit Digi's Web site at [www.digi.com](http://www.digi.com) or call 1-800-344-4273 (U.S.) or (612) 912-3444 (International).

About Tropic SA

Tropico Systems and Telecommunications SA, based in Campinas, Brazil, is a supplier of telecommunication products and solutions in Brazil with over five million lines of its technology sold, corresponding to 30 percent of all digital central offices for public telephony in the country. Its main product, named Tropico RA, is a central office switch that ranges from small to very high capacity, and is able to support 100,000 subscribers. The company markets its products directly and can be contacted by phone at +55-19-707-3977 or fax at +55-19-707-3779. For more information, visit Tropico's Web site at [www.tropicosa.com.br](http://www.tropicosa.com.br).
